“PHOTONIC MATERIALS FOR ENERGY-SAVING APPLICATIONS”

Prof. Dr. Gabriel Lozano

Universität Sevilla, Spanien

Dienstag, 17.07.2018, 11.00 Uhr

INM, Leibniz-Saal, Campus D2 5

Gastgeber: Prof. Dr. Tobias Kraus

How light interacts with matter is central to optical technologies from solar cells to light-emitting devices. Advanced photonic materials enable a tailor-made control over this interaction, whether light is being absorbed or emitted. In this talk I will discuss how the absorption and emission properties of nanomaterials can be devised by providing them with the adequate photonic environment. Then, I will demonstrate that different designs of integrated photonic architectures allow precise control of colour and directionality of solid-state lighting converters and enhance the light-harvesting efficiency and aesthetic properties of dye-sensitized and perovskite solar cells.
